

Citation Integrity Audit

Lab 1

Student: Mili Atulbhai Acharya
Roll Number: MHM2026006
Programme: M.Tech IT — HMIIT
Topic ID: T14
Topic: Human Trust Calibration in Human–Agent Collaboration for Autonomous Research
AI Tool: ChatGPT
Generation date: 21 August 2026

Audit Summary

The original AI-generated paper contained 28 references. Ten references were selected systematically for deep verification using the prescribed sampling procedure.

Results

Classification	Count
Verified	4
Wrong metadata	4
Frankenstein	0
Fabricated	0
Identifier mismatch	2
Total audited	10

Authenticity Score: 77.5/100
Prediction Accuracy: 80%

The audit demonstrated that citations can look highly convincing while still containing incorrect metadata or identifier problems.

Main Lesson

The presence of a citation is not proof that the cited work exists, that its metadata are correct, or that it supports the claim for which it was cited. AI can help discover candidate references, but final verification should rely on publisher records, DOI records, scholarly indexes, or other authoritative sources.
